

## Skin Lesions in the Veterinary Practice

**Cryotherapy** is a practical, fast and primary form of treatment for skin lesions. Preparation and aftercare are minimal to non-existent.

- Quick and painless — no need for anesthesia
- Low risk of complications and no anesthesia risk for older dogs
- Can treat skin masses in as little as 1 treatment.
- Affordable! Most masses cost just \$45 and each additional mass only \$30
- Out Patient Procedure that can be done with owner present
- Non-invasive – no need for pain meds

Cryo**Pen**<sup>®</sup> ..... is our solution

- Skin tags
- Sebaceous adenomas
- Benign and cancerous skin growths
  - Oral masses
  - Eye lid tumors
  - Lick granulomas
